The Challenges for Business Users with File Services

Egnyte in Action

Balfour Beatty

Balfour Beatty, an international leader in construction, identified that going paperless could help them control costs and create a more agile business. But how could they make sure employees and subcontractors on multiple job sites were all working off of the same, up-to-date project plans, without printing them out? Simple! They used Egnyte's Enterprise File Services.
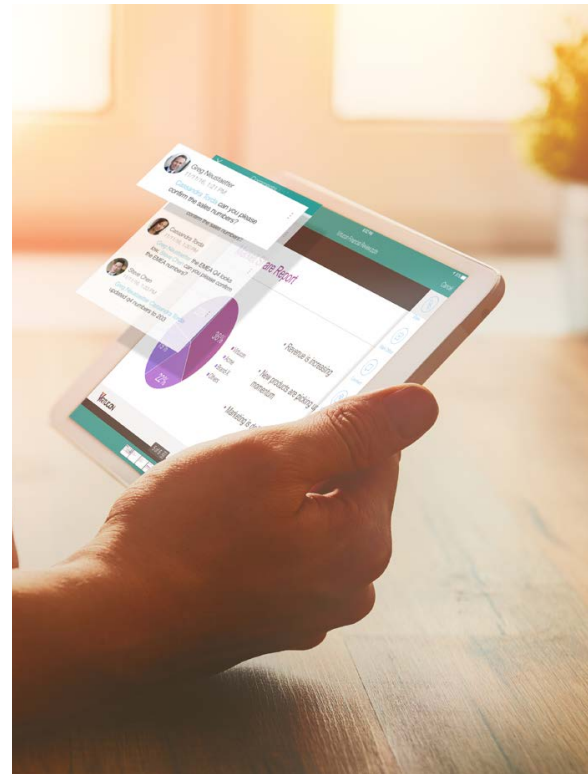

With Egnyte, Balfour Beatty could give everyone timely access to the files they needed from their mobile devices. This eliminated the need to print those files and cut project costs by 71 percent. Users also leveraged Egnytes ability to integrate with on-premises and cloud storage solutions to quickly access files at job sites, even when Internet access was not available. Overall, Balfour Beatty saved $5M on a project by using iPads and Egnyte.

Overview

Enabling the flow of information both inside and outside of your organization is vital to driving your business forward. It needs to be easy for you and your employees, contractors, vendors, and even customers to quickly and securely share files to enable collaboration, innovation and productivity.

These groups may be using different productivity (e.g., Microsoft Office and Google Apps) and file-sharing applications, as well as devices, which add complexity and costs to projects, not to mention security risks. Users often become frustrated dealing with version-control issues, multiple cloud accounts, and misalignment on critical information.

What you need is a file services solution that can support all the ways you and your teams work, while providing the full visibility and centralized control that will enable you to streamline your workflows and increase your productivity. You need a solution that allows you to use your preferred devices and apps to get work done and to easily collaborate with others, both internally and externally, in a way that respects the integrity and privacy of your information. You need Egnyte!

Your Business. Your Way.

You can use Egnyte Enterprise File Services in the office or on the go to quickly and easily access and share files with users, both inside and outside your organization. Unlike other file services providers, Egnyte works with many of the devices and apps you are already using.

There's no new complex interface to learn or disruption to the way you normally get work done. Egnyte supports iOS, Android, Windows, and other devices and integrates with business apps, such as Outlook, Microsoft Office, Google Apps and many more, to make it easy for you to collaborate with anyone, anywhere.

Egnyte also ensures you have the best experience and continuous availability, with the ability to integrate with on-premises storage to offer fast access to large files for those instances when bandwidth is constrained, unavailable or too costly.

The Egnyte Difference

Egnyte gives you a single solution that makes it easy to manage and share files with anyone, regardless of their location, or device and apps used.

Unified Visibility

- Single view of shared corporate folders across a team makes information sharing efficient and facilitates collaboration, while keeping private folders available for ad-hoc, peer-to-peer sharing.

- Common platform that both internal and external users can leverage makes it easy to quickly share files, regardless of which devices or applications are being used.

- Intelligence on how your files are being consumed by people inside and outside your organization helps you adapt your content strategies and improve collaboration workflows.

Centralized Control

- Simple, effective management delegation enables a non-IT admin to decide which users are allowed to upload, delete, and share files externally to help secure and optimize the flow of information.

- Granular permissions and file protections enable individual users to decide how to safeguard each individual file or folder they share (e.g., require a password, set an access expiration date, or get notified when the file is downloaded).

- Multiple domains ensure information from different groups, clients and partners remains contained and confidential.

Flexibility

- An open interface integrates with your existing workflows and productivity environment to enable you and other users to access the files you need, when you need them.

- A Web interface makes it easy for you to collaborate, even with those who are not Egnyte users or using different applications. No client is required to enable you to securely access and share files from anywhere, using any device.

Egnyte Enterprise File Services for Business Users

Egnyte delivers the unified experience, mobility and intelligence you need to streamline your content strategies and maximize productivity.

Unified User Experience

Quickly and easily share files and collaborate with people inside and outside your organization, using your favorite apps and devices in a way that is more productive and secure. The services are so intuitive that you can start to take advantage of the advanced file-sharing capabilities in seconds.

Mobility

Work on the go. You can rest assured that you will be able to use whatever mobile device you choose to access your files, as if you were in the office. The file services can adapt to factor in constraints from your environment and ensure you have continuous access to your content, even when Internet connectivity is down.

Content Intelligence

Uncover opportunities to optimize your content strategies and increase workflow efficiencies. This service proactively identifies potential work group aliases, folder structures and access rights that can help streamline the flow of information and improve productivity.

The Benefits of Egnyte

Egnyte enables you to quickly, easily, and securely collaborate to drive your business forward.

Increase Productivity

Ensures everyone is aligned and working on the same page (with the latest files) by offering a single, common platform that everyone can use to access and share files, regardless of the devices or applications they have. With Egnyte, it's easy for Microsoft Office, iWork and Google App users, both inside and outside of the organization, to collaborate seamlessly. Thanks to Egnyte Enterprise File Services, the service will be fast, so you can work with the files you need, when you need them, even when you don't have Internet access.

Protects Information

Gives you control over your files to ensure your proprietary information and sensitive customer data remains contained and confidential. Egnyte enables business administrators to determine which users are allowed to upload, modify, download, delete and share files, internally and externally. Individual users can also set granular permissions, such as requiring a password, setting an access expiration date, receiving a notification when a file is downloaded, etc., to ensure you have the end-to-end security you need.

Optimizes Operations

Delivers visibility and insights on how your files are being accessed, who is accessing them, where they are located, and with which devices, so you can understand your collaboration environment and develop content strategies to optimize the flow of information and improve your users' experience.
