# Take Your Microsoft Investment to the Next Level with Egnyte

Egnyte for Microsoft provides comprehensive solutions that help orchestrate the digital workplace. It delivers a customizable collaboration environment that enables users to work better together from any location, using any device. Additionally, it provides full administrative control over the content residing in the cloud, on–premise or both.

End User → **Application Client** — IOS, Android, Windows, Desktop

Microsoft

- 01 Microsoft Dynamics 365
- 05 Power Automate
- Azure Blob Storage, Backup, & DR — Azure Blob, Azure Backup, Azure Site Recovery
- Microsoft File Management — OneDrive for Business, Windows Server — 02
- Azure Archival
- 03 Azure VM — Virtual Machines, Storage Sync
- Identity Authentication
- Microsoft Intune
- Microsoft Azure Active Directory
- Azure Key Vault

EGNYTE Content Service Platform

On Premise For Continuity, Cost Reduction, and Speed

Leading Industry Application Integrations — BLUEBEAM, PROCORE, Benchling, Science Exchange, ORION

HIPAA COMPLIANT, ISO, AICPA SOC, FDA 21 CFR Part 11, SSAE 16 CERTIFIED, CSA Cloud Security Alliance, FINRA, GDPR

04 **Storage Sync in Azure** — Storage Sync — Hybrid Workflows, from on Premises to Cloud and Back

01 Control Content Sprawl

The ability to easily share content and spin up new zones of collaboration (within channels, chats, tabs and inside files themselves) is one of Microsoft 365's greatest strengths. However, as users take advantage of these great features, content sprawls uncontrollably across Teams, SharePoint and OneDrive. This sprawl creates a burden on IT admins, who need visibility into their data footprint across the Microsoft ecosystem. Using Egnyte in tandem with M365 maximizes both flexibility and control. With Egnyte, IT gets real-time visibility into what is being shared by whom, while users retain the freedom to work how they want, in the application they need.
02 Secure Sensitive Content

For any business, protecting critical content is essential - but is increasingly more difficult as data is spread across repositories and geographies. Ransomware, breaches and insider attacks cost time and money and put you at risk for noncompliance with regulatory requirements and data-lifecycle policies. Manual processes can not keep up. Egnyte's machine learning-based content intelligence engine automatically classifies sensitive, redundant or obsolete content - no matter where it resides. Automatic alerts can also be set up to alert admins of unusual or out-of-policy file access or sharing, further securing data. Unlike the myriad plugins and do-it-yourself options available to M365 customers, Egnyte is completely turnkey, requiring no specialized training or coding.
03 Boost User Productivity

While the volume of cloud data is growing all the time, there are still many situations where "cloud only" won't cut it. For example, teams need content cached locally when working on large files or in remote locations with slow and inconsistent connectivity. Egnyte continuously syncs to a centralized cloud repository so users can always access the latest version, eliminating the time lost searching for the most current version of a file. With Egnyte, users have one intuitive, drive-letter interface to find and access all of their content from any application, on any device, anytime, anywhere.

04 Maximize Public Cloud

There are innumerable opportunities to leverage public cloud to improve productivity and reduce cost. However, having data spread across multiple repositories often makes it a complex and time-consuming manual process. Egnyte makes it easy. Through its native integration with Azure, Egnyte automates the transfer of files and folders from all repositories to a low-cost Azure repository without impacting governance, usability or visibility. The same integration also gives you access to advanced data-processing services like cognitive compute and cloud-scale analytics to run against your content.

05 Automate Business Processes

Content has an impact beyond communications and ad hoc collaboration: it's the lifeblood of many critical operational processes. The challenge is, processes can vary dramatically from one industry to another, as well from company to company. That's why it's common to build custom processes and workflows, integrating across third-party applications, with content at the center. Egnyte's native integration into Microsoft Power Automate, as well as leading industry applications like Procore, Orion, Slack, Zoom and many others, allow you to create and automate business processes better, faster and cheaper.
